Every machine must now add value to the customer experience to help drive sales, whilst also being able to comply with strict government legislation.

QScale allows you to be fully compliant with the recent government legislation on displaying allergen and nutritional content. It is fully customisable to enable you to show everything from traceability information through to customer recipe suggestions.

Our networked systems mean that for areas of your business that do not require the ability to weigh, a more suitable standard Point of Sale terminal can be used, whilst all machines reside and communicate across a single network. The result is not only significant cost savings, but also an increase in speed of service.

QScale has been developed using Cunninghams EPOS Group's market-leading Point of Sale software Quantum.

Cunninghams EPOS Group have been providing weighing solutions across the United Kingdom for the past forty years. During this period we have seen the retail sector evolve, and the need for more complex weighing and Point of Sale solutions increase. Gone is the necessity to simply weigh accurately and print, today's retailers are demanding more.
