

Absolute.POS

A Multiplatform EPOS solution
Designed for Restaurants

Overview:

Absolute.POS is an in-house software developed by Cunninghams EPOS Group that is perfect for businesses within the Retail or Hospitality industry. Increasing efficiency and helping to provide a better customer service, Absolute.POS will streamline your business.

Key Features:

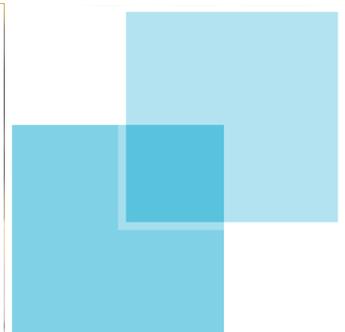

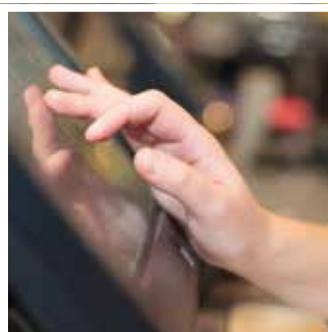

- **Table management**
- **Basic stock control**
- **Reservations module**
- **Customer loyalty module**
- **Emailed receipts and reservation confirmation**
- **Scheduled reporting**
- **Mobile POS tablet solution**
- **Integrated EPOS scale**
- **Chip & pin integration**

Providing our customers with the best hardware available is essential to Cunninghams EPOS Group. Utilising the Toshiba STA10 touch screen, with its compact, robust and low cost of ownership being second to none. Visit any of our offices located throughout the UK or book a free no obligation demonstration to view the latest hardware we offer.

Absolute.POS provides a clear graphical display of your floorplan. This allows the user to see the status of the table at a quick glance. Green means that the table is vacant, red tables are occupied, blue tables are awaiting the bill and will be vacant soon.

Being our only in-house developed software, Absolute.POS is at the cutting edge of the EPOS market. Our software development team works on improving features, latest releases and updates all day, every day, ensuring that Absolute.POS is at the forefront of all things EPOS.

When we set up a new product menu, we like to make sure that the customer gets exactly what they want, down to layout, drop downs and functionality. The layout can also be adjusted to accommodate for left and right hand use, with all colours being customisable.

Absolute.POS

Table Bookings

Upon receiving a booking, you will only need to enter the customer's details once. From there, every time the customer rings, you can reserve any table with the customer's details assigned to it.

Easy Add New Item

Cunninghams EPOS Group have made it very easy to add new items either at the touch screen or at back office. A user with the correct authority can add or edit an item within a few simple clicks.

Thermal Bill Printing

Make the most of your thermal printer using it as a receipt and report printer. We will explain the benefits of each individual printer at your free no obligations demonstration.

Contact Customers

You will be able to contact your customers in a variety of ways. Simply run a report by a certain criteria i.e. postcode, date of birth, expiry date, which you can then text using a preset or 'on the fly' message template, e-mail or mail shot them your latest promotions, offers or news.

Eat-In Table Tracking

Do you have a restaurant area where the customers can sit and sample one of your delicious pizzas? Absolute.POS can accommodate 'Table Tracking', whether the customers pay on ordering or pay at the end of their meal, this system can handle it.

Caller I.D. / Take Away Section

If you are still taking customer orders using a pencil and paper, then this might interest you. After a customer has been added to the database, Absolute.POS recalls previous customer transactions, allows for reordering and knows exactly where it will be delivered to. Fast, simple and easy to use.

Operator Security

It's possible to tailor the features available to individual operators, even down to who does no sales, returns, refunds and voids, all through a manual sign-on code, an iButton, or even swipe card.

Expandability

Absolute.POS is completely networkable, but the touch screens will operate without the need to link to a Back Office computer if you do not require one. Cunninghams EPOS Group will obviously help you understand the right solution for you.

Multiple Price Levels

The software allows for up to 15 different prices, available on each item which can be activated via scheduler. This could benefit your loyalty customers, or be suitable for a variety of promotions.

Hand-Held Waiter Pad

Cunninghams EPOS Group have developed Absolute.POS to be compatible with multiple hand-held waiter pads, ensuring that your business is at the height of Wireless Technology. The waiter pads ensure a faster service as the transactions are sent directly to the EPOS terminal and relevant peripherals (i.e. Kitchen Printer). This, in turn, provides higher productivity, increased sales, improved guest satisfaction, and reduced table turn time.

Customer Groups

Absolute.POS boasts a vast amount of customer groups which are great for providing your customers a way of interacting with their spending. These groups can cover almost anything, for example: accounts, points, discounts – all of which could be effected across all items sold or individual items.

Accounts – Positive and Negative

Allow your customers to either pay up front, which may entitle them to cheaper prices around the facility or build a credit account with personalised allowances.

Points

Set up customer groups so they can receive points for the money they spend in-store. Items can be set up to receive various points per £1, and you can limit it to specified items.

Discounts

Allocate your customers in to different discount groups to simply access a different, cheaper, price structure.
